

**CLEAN COPY OF AMENDED PARAGRAPH
ACCOMPANYING PRELIMINARY AMENDMENT**

Amended first paragraph of page 45 of the specification:

A1
The isolated membrane proteins were separated electrophoretically before transfer to Nylon membrane. The position of the over expressed protein was revealed by Coomassie stain. This region of the membrane was excised and the protein was N-terminal sequenced. The first eleven amino acids of this protein were XXETDLTSVGT SEQ ID NO:52 which corresponds to amino acid residues 52 to 62 (inclusive) of the amino acid sequence predicted to be expressed by the over expression construct as defined in this example.
